Project Design Phase-I
Solution Architecture

Date	19 September 2022
Team ID	PNT2022TMID11434
Project Name	Project – Smart Waste Management System for Metropolitan Cities
Maximum Marks	4 Marks

Solution Architecture:

The latest developments in the Internet, with its underlying technologies, smart sensors and communication technologies, provide the possibility of connecting machines, devices, software, and objects communicating among them without human intervention.

- Find the best solution to solve the problem which arise.
- Define design phase, ideation phase and solution requirements.
- Describing their devices, objects communicating and other aspects of software.
- The solution is defined, managed and delivered.
